

Does double pane glass insulate a sunroom?

Double pane glass with Low-E coating helps insulate a sunroom. The insulation is enhanced if the space between the panes is filled with gas. For sunrooms in climates with extreme heat or cold,homeowners can choose triple pane glass for maximum insulation.

What type of glass is used to build a sunroom?

This will give you a better idea of what type of glass is being used to build your room. A truly insulated sunroom is built using double-pane glass- never single pane glass. Between the layers of glass is usually an inert gas such as Argon, which provides a barrier to insulate the room from outside temperatures.

Why is tempered glass used in sunrooms?

Sunrooms have tempered glassin the windows because it's safer and strongerthan standard glass. Tempered glassis used in sunrooms to ensure safety and durability.

Is triple paned glass suitable for a sunroom?

For a homeowner in an extreme climate, triple paned glass is a good choice for insulating a sunroominside. For a homeowner in a mild climate, double paned glass may be sufficient to keep the sunroom comfortable.

How do I choose the best glass for my sunroom?

Where you choose to build your sunroom will also help determine which type of glass makes the most sense for your unique project. While sunroom location and type are very important, the safety of the glass is also a necessary consideration. Make sure that you ask for tempered glass.

Should you build a sunroom with floor-to-ceiling glass?

To maximize a great outdoor view from your home,a sunroom with floor-to-ceiling glass, also called a solarium, could be the right choice for you. This special sunroom has wall-to-wall glass as well as a glass roof. Where you choose to build your sunroom will also help determine which type of glass makes the most sense for your unique project.
