Armenia energy storage project approved

Why does Armenia need a nuclear power plant?

Armenia depends on imports to meet much of its energy needs, particularly natural gas from the Russian Federation. It is one of the few ex-Soviet republics to avoid significant energy subsidies, and it is the only country in the Caucasus region to possess a nuclear power plant.

What is Armenia's energy system?

Armenia's energy system depends primarily on natural gas, nuclear and hydroelectricity. Natural gas is by far the largest contributor to total energy supply (TES), as well as the main energy carrier in total final consumption (TFC). Since the transport sector depends primarily on natural gas, the importance of oil in the economy is relatively low.

How is energy research and development funded in Armenia?

Given the lack of state funding, the main institutions involved in energy-related research and development in Armenia are primarily self-financed, with most funding coming from project-based contracts with international organisations.

How to develop a national energy strategy in Armenia?

Formulate an Energy Research, Development and Innovation Strategy, including the setting of clear priorities within thematic areas and applied research, to ensure that priorities are linked with those of the national energy strategy adopted in January 2021. Armenia 2022 - Analysis and key findings. A report by the International Energy Agency.

Why does Armenia need private investment?

Armenia's power sector is heavily dependent on imported fuels, especially natural gas, which creates significant energy security risks, compounded by the global energy crisis. Attracting private investment is essential to fund the large-scale projects needed in the sector.

Where does energy come from in Armenia?

Domestic energy production comes mainly from Armenia's one Soviet-era nuclear power plant(Armenian Nuclear Power Plant [ANPP]) and from hydroelectricity. Since Armenia does not produce fossil fuels, all of the natural gas and oil products used in the country have to be imported.

Creation and use of a techno-economic model to analyse the Armenian electricity system and determine cost-optimal deployment of battery energy storage system (BESS)

The construction norm RACN 24-01-2016 "Thermal Protection of the Buildings" (mandatory building code based on Russian norms), approved in 2016, also tightens the requirements for ...
