Do lithium ion batteries need a BMS?

Lithium-ion batteries differ from lead-acid batteries in that they require a BMS*for high-accuracy monitoring of battery voltage,charge-discharge current,temperature,etc. To prevent battery depletion,a reduction in standby current is indispensable. ABLIC provides a host of products that are ideal as ICs in a BMS.

Do LiFePO4 batteries need a BMS?

However, without a BMS, these batteries are vulnerable to issues like overcharging, over-discharging, and temperature extremes, which can shorten their lifespan or even cause damage. A BMS ensures that each cell in a LiFePO4 battery operates within safe parameters, protecting against potentially hazardous situations.

What voltage should a BMS be rated for?

In any case,the BMS must always be rated for the same voltage as your battery pack (12V,24V,or 48V). Let's say your battery pack has a 100Ah capacity and a 0.2C C-rate. This means the battery can safely discharge at 20% of its capacity. So,the BMS needs to handle at least: $100\text{Ah} \times 0.2\text{C} = 20\text{A}$ max discharge,sustained for 5 hours.
