

What are the different types of energy storage facilities?

Newly introduced facilities are: a PV cell, an ESS (energy storage system, a LIB that is equipped with a battery management unit), an IPMS (integrated power management system) and an EMS. The EMS is configured with the client-server model (Fig. 2).

Why do mobile phone base stations use DGS?

Therefore,many mobile phone base stations use DGs to generate power if the grid power is cut,which consumes over 2 billion liters of diesel oil per year and exhausts over 11 million tons of CO2 per year. In many cases, the mobile phone business in India is shared by several specialist companies.

Can a base station convert AC power into DC power?

Most base stations are equipped ideally with rectifiers to convert AC power into DC power. However, such a procedure does not fit in with our demonstration test, as it is necessary to connect the storage battery to the controller of the rectifier to achieve a fine control of the voltage.

What is the energy storage capacity requirement in 2023?

As per National Electricity Plan (NEP) 2023 of Central Electricity Authority (CEA), the energy storage capacity requirement is projected to be 82.37 GWh(47.65 GWh from PSP and 34.72 GWh from BESS) in year 2026-27. This requirement is further expected to increase to 411.4 GWh (175.18 GWh from PSP and 236.22 GWh from BESS) in year 2031-32.

What is a long-term trajectory for energy storage obligations (ESO)?

A long-term trajectory for Energy Storage Obligations (ESO) has also been notified by the Ministry of Power to ensure that sufficient storage capacity is available with obligated entities. As per the trajectory, the ESO shall gradually increase from 1% in FY 2023-24 to 4% by FY 2029-30, with an annual increase of 0.5%.
