

China's independently developed energy station

What is China's first deep-sea semi-submersible oil production and storage platform?

It is the world's first 100,000-tonne deep-sea semi-submersible oil production and storage platform independently developed by China. The project faces a number of technical difficulties, including the depth of water - nearly 1,000 metres - as well as high temperature and high pressure, according to CNOOC.

Why is China's Oil & Gas Project important?

It once again demonstrated the advancements of China's independent deep-water oil and gas development technology and the reliability of China's large-scale deep-water oil and gas core equipment, said CNOOC, adding that it marked an important step forward made by the country in the field.

When will China's 'deep sea No 1' oil plant start production?

The world's first 100,000-ton deep-sea semi-submersible oil production and storage platform, China's self-developed "Deep Sea No 1" energy station, has successfully completed installation of all equipment and is expected to start production at the end of June, China National Offshore Oil Corporation (CNOOC) said on Saturday.

What is China's longest deepwater oil & gas pipeline?

China has reportedly completed the construction of its longest deepwater oil and gas pipeline, as part of the Phase 2 development of Shenhai-1. The 115.5km pipeline connects the Phase 2 offshore production platform with the onshore receiving station.

Upon completion, it is expected to become the first independent flywheel + lithium battery hybrid energy storage power station in China, capable of meeting both frequency ...

Shenhai-1 marks China's first independently developed ultra-deepwater energy station, which has become operational in June 2021. The second phase of Shenhai-1 will ...

It was learned from China National Offshore Oil Corporation (CNOOC) on January 14, 2021 that the world's first 100,000-ton deep-water semi ...

China National Offshore Oil Corporation (CNOOC) announced on the 14th that the world's first 100,000 ton deep-water semi submersible production and storage platform, the ...

This energy storage power station is one of the 2022 energy storage demonstration projects in Shandong Province. It can store 200 MW hours of electricity in one charge and meet the daily ...

Deep Sea No 1, the first large-scale, ultra-deepwater gas field independently explored and developed by

China's independently developed energy station

China, has produced over 1 billion ...

Non-fossil energy consumption accounted for more than crude oil for the first time In 2024, China's GDP growth rate reached 5.0%, an increase of 0.2 percentage points year-on-year, ...

With a view to eco-environmental progress, China's energy transition is gathering pace to develop a new model of energy consumption that is economical, efficient, green and inclusive. This will ...

The clean-energy system at China's Qinling research station in Antarctica comprises solar panels, wind turbines, a hydrogen energy system and batteries.

According to the national energy plan, China's large lithium-ion battery energy storage has entered the stage of large-scale commercialized operation as ...

The CR450 EMU train is a vivid practice of China's innovation-driven development strategy, a comprehensive display of the country's scientific and technological innovation and ...

The race to dominate low Earth orbit (LEO) has never been more intense. From government-led programs like the International Space Station (ISS) and China's Tiangong to ...

The world's first 100,000-ton deep-sea semi-submersible oil production and storage platform, China's self-developed "Deep Sea No 1" energy station, has successfully ...

Independently-developed key products and models that demonstrate the great achievements China made in terms of science and technology level as well as manufacturing capacity are ...

A clean energy system tailored for polar conditions has been put into operation in China's Qinling station in Antarctica.

At the national level, the white paper China's Nuclear Emergency Preparedness was released, which introduces and publicizes the overall situation of China's nuclear emergency work to the ...

It was learned from China National Offshore Oil Corporation (CNOOC) on January 14, 2021 that the world's first 100,000-ton deep-water semi-submersible production was independently ...

BEIJING, March 7 (Xinhua) -- China's independently developed hydrogen fuel cell has successfully generated electricity at the country's Qinling Station in Antarctica, marking the first ...

Shenhai-1 marks China's first independently developed ultra-deepwater energy station, which has become operational in June 2021. The ...

China s independently developed energy station

The world's first 100,000-ton deep-sea semi-submersible oil production and storage platform, China's self-developed "Deep Sea No 1" ...

On July 19, the first batch of 500MW/200MWh energy storage units of Huadian Kashi Million Energy Storage, the largest electrochemical independent energy storage plant in ...

Independent Energy Storage Power Station Market size was valued at USD 10 Billion in 2024 and is forecasted to grow at a CAGR of 13.2% from 2026 to 2033, reaching ...

China's independently developed hydrogen fuel cell has successfully generated electricity at the country's Qinling Station in Antarctica, marking the first ever application of ...

Hualong One is China National Nuclear Corporation's (CNNC) third-generation nuclear power technology with independent intellectual ...

After more than 20 years of high-quality development of China's electric vehicles (EVs), a technological R & D layout of "Three Verticals and Three Horizontals" has been ...

China's independent brands of new energy vehicles must achieve high competitiveness and global influence to advance the development of the nation's new energy ...
