What is mobile energy storage?

In addition to microgrid support, mobile energy storage can be used to transport energy from an available energy resource to the outage area if the outage is not widespread. A MESS can move outside the affected area, charge, and then travel back to deliver energy to a microgrid.

Does mobile energy storage improve power system resilience?

Compared to stationary batteries and other energy storage systems, their mobility provides operational flexibility to support geo-graphically dispersed loads across an outage area. This paper provides a comprehensive and critical review of academic literature on mobile energy storage for power system resilience enhancement.

Does Power Edison have a mobile energy storage system?

Power Edison has deployed mobile energy storage systems for over five years, offering utility-scale plug-and-play solutions. In 2021, Nomad Trans-portable Power Systems released three commercially available MESS units with energy capacities ranging from 660 kWh to 2 MWh.

What are the advantages of mobile energy storage technologies?

Compared with traditional energy storage technologies, mobile energy storage technologies have the merits of low cost and high energy conversion efficiency, can be flexibly located, and cover a large range from miniature to large systems and from high to high power density, although most of them still face challenges or technical bottlenecks.

What is a transportable energy storage system?

Referred to as transportable energy storage systems, MESSs are generally vehicle-mounted container battery systems equipped with standard-sized physical interfaces to allow for plug-and-play operation. Their transportation could be powered by a diesel engine or the energy from the batteries themselves.

Why is mobile energy storage better than stationary energy storage?

The primary advantage that mobile energy storage offers over stationary energy storage is flexibility. MESSs can be re-located to respond to changing grid conditions, serving different applications as the needs of the power system evolve.
