What is ESS & how does it work?

ESS solutions capture excess energy when it is available to provide uninterrupted power when it's not. With up to 22 hours of energy storage, ESS' scalable, flexible solutions enable intermittent energy to provide baseload power to meet growing energy demand from AI data centers and an increasingly electrified society.

#### What is ESS Energy Storage?

With up to 22 hours of energy storage, ESS' scalable, flexible solutions enable intermittent energy to provide baseload power to meet growing energy demand from AI data centers and an increasingly electrified society. ESS' American-made solutions are rapidly deployable, available in months instead of years.

#### Does ESS support American energy dominance?

Built in the U.S. and supported by an American supply chain, the Energy Base is supporting American Energy Dominance. ESS' latest long-duration energy storage (LDES) solution is redefining energy storage, with industry-leading design and operational flexibility to cost-effectively meet customer needs.

#### Why should you choose ESS for Your Energy BASE project?

ESS has worked closely with leading engineering firms to develop standard, cost-effective design parameters that enable deployment of gigawatt-scale storage. Energy Base projects can be customized to minimize visual impact and deliver up to 300 MWh/acre energy density.

#### What makes ESS Energy base unique?

Each Energy Base project leverages ESS' proven core technologies to deliver the power, energy and layout customers need. Its modular architectureand the inherent safety of ESS iron flow technology enable compliance with safety regulations and community guidelines, providing peace of mind for all stakeholders involved.

#### What makes ESS a great battery company?

ESS continues to lead the industry with a commitment to innovation, research and development that underpins every iron flow battery project. These awards underscore our commitment to powering data centers, companies and communities worldwide with clean reliable energy made possible with ESS' iron flow technology.
