### How can farmers benefit from solar energy?

Farmers can benefit from solar energy in several ways--by leasing farmland for solar; installing a solar system on a house, barn, or other building; or through agrivoltaics. Agrivoltaics is defined as agriculture, such as crop production, livestock grazing, and pollinator habitat, located underneath solar panels and/or between rows of solar panels.

### Should Irish farmers install solar panels on shed roofs?

For Irish farmers, installing solar panels on shed roofs represents a practical step forward in sustainable farming. It not only reduces energy costs but also aligns with global movements towards greener practices. This is a shortened version of an article by Teagasc specialist Barry Caslin which was first published on RTE Brainstorm.

## Can a ground-mounted solar panel be installed on a farm?

Depending on the lease terms, ground-mounted solar may or may not be allowed on the site. If it is allowed and current farming operations are suitable for a ground-mounted solar PV array or if unused land exists, ground-mounted solar PV may be an option. How can I reduce soil compaction when installing ground-mounted solar panels?
