

What is a rechargeable lithium iron phosphate battery?

Rechargeable lithium iron phosphate batteries use LiFePO 4as the principle cathode material. Despite having a lower energy density than other lithium-ion chemistries, lithium iron phosphate batteries can provide better power density and longer life cycles. Emerging Power is your premier lithium battery assembler.

Are lithium iron phosphate batteries better than other lithium ion chemistries?

Despite having a lower energy density than other lithium-ion chemistries, lithium iron phosphate batteries can provide better power density and longer life cycles. Emerging Power is your premier lithium battery assembler. We manufacture custom lithium iron phosphate battery packs and assemblies for many applications.

What are rechargeable lithium batteries?

Rechargeable lithium batteries are popular for a wide array of applications. These battery packs provide excellent energy density, hold their charge for long periods when not in use, and do not experience "memory effect" in charging.

What is lithium iron phosphate (LFP)?

Lithium iron phosphate (LiFePO 4), also called LFP, is one of the more recently-developed rechargeable battery chemistries and is a variation of lithium-ion chemistry. Rechargeable lithium iron phosphate batteries use LiFePO 4 as the principle cathode material.

What is a lithium battery?

Custom Lithium Battery Packs & Assemblies Lithium is the lightest non-gaseous metal, and its negative potential for battery packs is higher than any other metal. Lithium-chemistry batteries and battery packs have the highest specific energy (energy per unit weight) and energy density (energy per unit volume) of all battery types.

Why are rechargeable lithium-ion batteries so popular?

Rechargeable lithium-ion (Li-ion) rechargeable battery packs continue to grow in popularity thanks to their greater energy density--up to twice that of nickel- and lead-based chemistries--and low self-discharge rates, as well as ever-improving technologies that continue to make them safer and less expensive than earlier lithium battery types.
