

How can a base station be configured?

A base station can be configured in one of four ways, depending on whether the tests are conducted or radiated, and the configuration of the station. Type 1-C refers to NR base stations operating at FR1 with requirements at individual antenna connectors.

What are the different types of base stations?

Some basic types of base stations are as follows: Macro-base stations are tall towers ranging from 50 to 200 feet in height, placed at strategic locations to provide maximum coverage in a given area. Those are equipped with large towers and antennas that transmit and receive radio signals from wireless devices.

Why are base stations important in cellular communication?

Base stations are important in the cellular communication as it facilitate seamless communication between mobile devices and the network communication. The demand for efficient data transmission are increased as we are advancing towards new technologies such as 5G and other data intensive applications.

What is a base station?

What is Base Station? A base station represents an access point for a wireless device to communicate within its coverage area. It usually connects the device to other networks or devices through a dedicated high bandwidth wire of fiber optic connection. Base stations typically have a transceiver, capable of sending and receiving wireless signals;

What are the components of a base station?

Power Supply: The power source provides the electrical energy to base station elements. It often features auxiliary power supply mechanisms that guarantee operation in case of lost or interrupted electricity, during blackouts. Baseband Processor: The baseband processor is responsible for the processing of the digital signals.

Do base stations have to pass conformance tests?

To ensure that base stations live up to their promises, they must now pass new conformance tests. Conformance testing is an essential part of the base station life-cycle, which requires an in-depth understanding of 3rd Generation Partnership Project (3GPP) specifications.
