

What is a base station power cabinet?

The base station power cabinet is a key equipment ensuring continuous power supply to base station devices, with LLVD (Load Low Voltage Disconnect) and BLVD (Battery Low Voltage Disconnect) being two important protection mechanisms in the power cabinet.

How many base stations/repeaters can be installed in a cabinet?

recommended when no cabinet fans are used. Up to three base stations/repeaters can be mounted in a 76.2 cm (30 in) or larger cabinet with two rack units of spacing between each base station/repeater. This will result in thermal specification performance of -30°C (-22°F) to +40°C (+104°F).

How do I pick up a base station/repeater?

DO NOT pick up the base station/repeater by holding the Preselector (if so equipped). Use the handles on the front of the base station/repeater, or the Power Supply and Power Amplifier casings when picking up the base station/repeater. Remove the station front bezel from its chassis locking clip by carefully pulling it forward.

How does a base station/repeater work?

The Power Supply module in the base station/repeater provides DC power to the Receiver, Exciter, SCM and Power Amplifier module via one or more of the three DC output taps; 28.6 VDC, 14.2 VDC and 5.1 VDC by using a DC Input cable. The base station/repeater equipment can be mounted in a rack or cabinet.

Why are base stations important?

In modern communication networks, base stations, as core infrastructure, are crucial for stable operation.

How do I connect a battery to a base station/repeater?

Batteries must be connected to the base station/repeater through an Argus Technologies Battery Reverting Charger, Model #010-523-20 (Motorola Model #L1884) for 24 V charging systems. These systems were developed specifically for this interface and tested by Motorola for proper base station/repeater operation.
