electric shock. If an extension cord must be used, make and shape as those of plug on charger. condition. 11. Always charge battery in a well ventilated area. equate ventilation. WARNING: Risk of explosive gas. 12. Use charger as far away from battery as DC charger cables permit. 13. Do not expose charger to rain or snow. 14.

Is it safe to use electrical equipment outside?

When using electrical equipment or working near power lines outdoors, weather conditions and the presence of utility equipment present safety risks that are not typically found indoors. Therefore, it's important to operate equipment properly and be aware of potential hazards around you.

How can I protect my home from electric shock?

Prevent the risk of electric shock by keeping the following in mind when playing or working outdoors near power lines: Install your satellite dish as far from electric lines as possible, preferably at the opposite end of the house. Never let children fly kites, motorized airplanes or drones near power lines.

How do I use a power tool outside?

Follow these guidelines before, during and after operating a power tool outdoors: Read the tool's instructions, especially all safety warnings, before use. Plug the cord into a three-prong outlet on a three-conductor circuit. This provides the added safety of the neutral-to-ground connection provided by the third wire.

What should I do if a power line is down?

If you see a downed power line, always assume it is live and dangerous. Stay at least 30 feet away and immediately call 911 to report it. Customers serviced by underground power lines should be aware of landscaping clearance and other guidelines before digging near our equipment.

Can you shoot at a insulator on a utility pole?

Don't shoot at or otherwise damage insulators on utility poles. This is extremely dangerous and against the law. Insulators keep electricity from traveling down the pole. If an insulator is broken off or damaged, anyone coming in contact with the pole could be injured or killed.
