

What appliances can a 3KW Solar System run?

Let's see what appliances a 3kW solar system can run: Lights:A 3kW solar system can efficiently power all the lights in an average American home. This includes LED and CFL bulbs in various rooms. Let's say you have 10 LED bulbs, each using 10 watts. In total, that's 100 watts (0.1 kW).

#### How many watts in a solar panel?

1,000 / 5 = 200 Wattsolar panel. Now that we have our solar panel size figured out it is time to calculate the amp hour rating for the batteries you will need to keep your specified load running under all conditions. Let's say you choose a battery that is rated at 12 volts then you would do the following calculation:

### Should you buy a 15kW or 20kW solar panel system?

In such cases, considering a 15kW or 20kW solar panel system is a smart move. A system this size could run a refrigerator, electric stove/oven, microwave, lights, fans, TV, laptop, washing machine, clothes dryer, large well pump and even an entire house air conditioner.

### Is a 20kW Solar System right for You?

A 20kW solar system is well-suited for larger residential properties, generating more power than the average American home uses. However, it becomes especially practical if you rely on all-electric appliances or reside in a hot climate where continuous air conditioning is necessary.
