Should I upgrade or expand my solar panel system?

Upgrading and expanding your existing solar panel system could be your answer. When it comes to solar energy, maximizing efficiency and optimizing performance are crucial.

Can I add more solar panels if my roof is old?

Do not add more solar panels to your system if your roof is old, it is a leased system, or if you do not have enough roof space for extra panels. Contact your original solar installer to add more panels to your system.

Why add solar panels to an existing solar system?

How many solar panels do I need?

Adding between five and ten panels is usually enough to cover increased electricity usage, but it ultimately depends on how your usage has changed. Do not add more solar panels to your system if your roof is old, it is a leased system, or if you do not have enough roof space for extra panels.

Should I upgrade my solar system?

To determine if upgrading is the best option for your solar system, assess its performance, consider your energy needs, and consult with a professional solar installer. They can provide expert advice on optimizing your solar infrastructure and expanding its capacity to meet your evolving energy requirements.

Do I need more solar panels?

When you first get solar panels, the system is designed to install the right amount of solar panels to offset your historic electricity usage. If you start using more electricity after you go solar, you may need more panels to offset that additional electricity usage. In general, our electricity usage stays pretty consistent over time.

Can I claim a tax credit if I add more solar panels?

Yes, there are some incentives you can claim when you add more solar panels to your roof, but they are limited. If you already claimed the federal tax credit when you initially installed your system, you can only claim it again on the added cost of the additional panels.
