

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

#### How much do solar panels cost?

Solar panels only represent a fraction of system costs, and this has been analyzed by the NREL. The November 2021 technical report considers a PV module cost of \$0.34 per watt, which is equivalent to:

#### Where did photovoltaic cost data come from?

Photovoltaic cost data between 1975 and 2003 has been taken from Nemet (2009), between 2004 and 2009 from Farmer &Lafond (2016), and since 2010 from IRENA. Prices from Nemet (2009) and Farmer &Lafond (2016) have been converted to 2024 US\$using the US GDP deflator, to account for the effects of inflation.

#### How much does a PV module cost?

The November 2021 technical report considers a PV module cost of \$0.34 per watt, which is equivalent to: As the size of a solar array increases, photovoltaic modules represent a higher percentage of total costs, while the percentage of soft costs decreases.

#### What is solar technology cost analysis?

NREL's solar technology cost analysis examines the technology costs and supply chain issues for solar photovoltaic (PV) technologies. This work informs research and development by identifying drivers of cost and competitiveness for solar technologies.

#### What is included in the quoted price of a solar power system?

The quoted price of a solar power system also includes soft coststhat are not evident when looking at a completed installation: permitting,inspections,grid interconnection,taxes,transportation,land acquisition,design work,skilled labor,customer acquisition,overhead,profit margins,etc.
