

What is a container substation?

An intelligent solution for obtaining direct current quickly and economically is provided by container substations. By integrating the equipment in a modular housing and undertaking rigorous testing off site, Siemens is able to supply fully built and tested modular traction power substations to a consistent and high level of quality.

What is a containerized mobile substation?

Containerized mobile substations are sheltered and address applications in challenging environmental conditions including areas with high pollution, high humidity, extreme temperatures or sand storms. Containers are easy to transport and fast to install, by reducing foundation works as well as installation and commissioning effort on site.

What is the scope of supply for containerized Mobile substations?

The scope of supply covers the complete assemblywhich may include: Containerized mobile substations are sheltered and address applications in challenging environmental conditions including areas of high pollution, and humidity.

How can a container be transported?

The container can be transported by road, rail or waterand crane attachment provi-sions are fitted for loading and unloading. Siemens Mobility continuously improves its components and takes on trends from other industries to bring linked benefits to the rail infrastructure industry.

What is a container concept?

In a container concept, the complete substation comes from a single source: Planning, manufacturing, equipping and assembly of the electrical system are performed entirely by the manufacturer. Auxiliaries such as lighting, air-conditioning and ventilation systems come from a standard program.
