UAE Communication Base Station EMS

What frequency does EMS radio communication take place in?

EMS radio communication takes place in the VHF low band, VHF high band, and UHF band. VHF low band is the radio frequencies from 32-50 megahertz (MHz). They are able to follow the shape of the earth allowing communication over long distances. These frequencies are more susceptible to interference from, weather, buildings, and electrical equipment.

Who regulates the radio spectrum in the UAE?

TDRAis the body responsible for managing and regulating the Radio Spectrum in the UAE as per the Telecom Law. Regulations of the Radio Spectrum include:

What are the carriage requirements for maritime radio in UAE?

The carriage requirements include LRIT and EPIRB. 4.6 The usage of any maritime radio system in the UAE shall require a valid Authorization. The Frequency Spectrum Fees shall apply. Article (5) Call Sign and MMSI 5.1 The Call Sign for Ship Stations shall be assigned by the TRA.

What is a base station?

A base station is a radio operated from a fixed sitesuch as a dispatch center, hospital, or some other location. It usually runs off community electrical power and transmits at much higher power than smaller, portable radios. Alternative power in the form of generators or a set of batteries are usually available.

Why is communication important in EMS?

Communication in EMS is essential. Patients must be able to access the system, the system must be able to dispatch units, EMTs must have a means of communicating with medical direction and receiving facility, and EMTs must be able to communicate vital information to other personnel.

How does EMS radio communication work?

It may also convert the signal to a telephone signal and send the communications through public or dedicated telephone lines. EMS radio communication takes place in the VHF low band, VHF high band, and UHF band. VHF low band is the radio frequencies from 32-50 megahertz (MHz).
