

What if there is a voltage difference in a battery pack?

Therefore, you should pay attention to the brand from which you are purchasing your batteries. If there is a gap in the voltage of the battery pack, you can correct it with additional equipment, such as with a BMS, balance charging, etc. Stay tuned for Part 2 of voltage difference: How to prevent voltage difference.

What if there is a gap in a battery pack?

If there is a gap in the voltage of the battery pack, you can correct it with additional equipment, such as with a BMS, balance charging, etc. Stay tuned for Part 2 of voltage difference: How to prevent voltage difference. This is all that we're covering today.

How does voltage difference affect battery performance?

For battery packs, the voltage difference between individual cells is one of the main indicators of consistency. The smaller the voltage difference, the better the consistency of the cells and the better the discharge performance of the battery pack.

What causes a lithium battery to fail?

Root cause 2: Too long storage time. Lithium batteries are stored for too long,resulting in excessive capacity loss,internal passivation,and increased internal resistance. Solution: It can be solved by charging and discharging activation. Root cause 3: Abnormal heat.

What causes low voltage in a lithium battery?

Root cause 1: High self-discharge, which causes low voltage. Solution: Charge the bare lithium battery directly using the charger with over-voltage protection, but do not use universal charge. It could be quite dangerous. Root cause 2: Uneven current.

What happens if the battery cell matching standard is less strict?

If the matching standard is stricter, then the probability of the battery cell voltage difference will be smaller. On the contrary, if the battery cell matching standard is less strict or if there is no matching at all, the probability of the cell voltage difference will be greater, and this will result in premature battery failure.
