

What size solar inverter do I Need?

A 4.5 kW array (or ten 450-watt solar panels) would just about cover your consumption. The type of solar panels you choose can also impact the size of the inverter you need. Different types of solar panels have different wattage ratings and efficiency levels. The three main types of solar panels are monocrystalline, polycrystalline, and thin film.

Why should you choose a solar inverter size?

Inverters play a vital role in converting the direct current (DC) generated by your solar panels into usable alternating current (AC) for your home. Selecting the proper inverter size ensures that your solar system operates at its full potential, ultimately impacting energy savings and system longevity.

How do I choose a solar inverter?

This is the most critical factor in solar inverter sizing. Check the total wattage of your solar array (DC) and use it to calculate the appropriate inverter output (AC). For optimal results, a 6.6kW array typically pairs with a 5kW inverter, falling within the accepted array-to-inverter ratio of 1.15 to 1.33.

Do I need a solar inverter?

A: An inverter is a device that converts the direct current (DC) generated by your solar panels into alternating current (AC), which is used by most household appliances. You need an inverter to ensure that the electricity produced by your solar power system can be utilized in your home or fed into the electrical grid.

Should your inverter size match your solar panel size?

Match your inverter to your lifestyle,not just your roof. If you're running a fridge,home office,and PS5 all day,size accordingly. If you're barely home,go leaner. Here's the cheat code: your inverter size should usually match your solar panel system's size in kilowatts.
