

How does solar power generate electricity?

How Does Solar Power Create Electricity? Solar power generates electricity by using either solar thermal systems that convert sunlight into heat to produce steam that drives a generator, or photovoltaic systems, which transform sunlight into electricity through the photovoltaic effect.

How do solar photovoltaic cells work?

Solar photovoltaic cells are grouped in panels, and panels can be grouped into arrays of different sizes to power water pumps, power individual homes, or provide utility-scale electricity generation. Source: National Renewable Energy Laboratory (copyrighted)

What is a photovoltaic (PV) cell?

A photovoltaic (PV) cell,commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Some PV cells can convert artificial light into electricity. Sunlight is composed of photons, or particles of solar energy.
